Name: Braden Shiew Hao Wen

Monash ID: 33273375

Group: Applied_01_MA_G5

1. Brief Overview

Our group was tasked with specifying user and system requirements of a fun and interactive game designed to make Python programming fun and engaging for young learners called CodeVenture.

2. Individual Breakdown

Roles:

Braden (Me) – Educator

Sheng Jie – Young learner

Wei Zheng – Developer

Vincent – Parent of a young learner

Chloe (Another group) – Young gamer/learner

Tasks and Responsibilities:

Braden (Me) – Non-functional Requirements and Requirement Quality Analysis

Sheng Jie – Introduction, Overall Description and Formatting/Cleaning up

Wei Zheng – Stakeholder Analysis and Acceptance Criteria

Vincent – System Features

Chloe (Another group) – Interviewed by our group as another persona/stakeholder

Outcomes:

All members met their goals without much challenge.

3. Collaboration and Team Dynamics

Group meetings: Group meetings were mostly held online via chat. However, as Sheng Jie, Wei Zheng and I live close to each other, we did a lot of the work together in person, with Vincent working with us online. Overall, the group was good at voicing opinions and splitting workload efficiently.

Tools used for collaboration/communication: For communication, we created a group on Discord. As for collaborating on the project, we created a shared Microsoft Word document, and worked together on that file.

4. Self-Assessment

I worked on the ‘Non-functional Requirements’ and ‘Requirement Quality Analysis’ sections of the requirements document. I completed the tasks relatively easily, but I found myself struggling a little at the ‘Requirement Quality Analysis’ section as I was not sure on how to tackle it. Other than that, I had no other issues.

5. Peer Feedback

I have no complaints whatsoever as everyone greatly contributed to the project, completing their tasks without much trouble. There were no issues with communication either and every point got across clearly.
