Name: Braden Shiew Hao Wen

Monash ID: 33273375

Group: Applied_01_MA_G5

1. Brief Overview

Our group was tasked with reviewing the source code and previous submissions of another group as well as our own. These were done by writing a Software Quality Assurance for each group.

2. Individual Breakdown

Tasks and Responsibilities:

> No roles or specific tasks and responsibilities as the work was split evenly and every task was worked on by each member.

Outcomes:

> All members met their goals without much challenge, and everyone helped each other whenever there were issues.

3. Collaboration and Team Dynamics

Group meetings: Group meetings were mostly held online via chat. The group was voiced opinions and split workload efficiently. It is essentially the same as when we were doing the previous assignments.

Tools used for collaboration/communication: For communication, we used our group on Discord. As for collaborating on the project, we created shared Google Documents and worked together on those files.

4. Self-Assessment

In the beginning, I found the amount of reading and understanding of the other group's documents to be overwhelming. After taking my time to go through their documents as well as receiving help from my teammates, I managed to handle it. I learned not to lose motivation at the mere sight of too much information, which was what I tend to do before. I intend to rid myself of this flaw and approach tasks with a cool head from now on.

5. Peer Feedback

I have no complaints whatsoever as everyone greatly contributed to the project, completing their tasks without much trouble. There were no issues with communication either and every point got across clearly just as it was when we did in the previous assignments.
